

# Statistical Indicators Benchmarking the Information Society

*by Werner B. Korte, empirica*

IST-2000-26276

Technopolis

# Content

- SIBIS project: Statistical Indicators Benchmarking the IS:
  - Current status of work
  - New indicators
  - Indicator piloting via representative surveys
  - First results from surveys
  - Next steps
- Co-operation: SIBIS - Eurostat – NSIs - OECD – ESDIS - eEurope

# SIBIS Topics

- No. 1: Telecommunications and access
- No. 2: Internet for research
- No. 3: Security and trust

Objective 1:  
A cheaper, faster  
and secure Internet

- No. 4: Education
- No. 5: Work, employment and skills
- No. 6: Social inclusion

Objective 2:  
Investing in people  
and skills

- No. 7: e-Commerce
- No. 8: e-Government
- No. 9: Health

Objective 3:  
Stimulate the use of  
the internet

# SIBIS worksteps

- Topic Research Reports (9 topics) (2001)
- Gap Analysis and new Indicator Development (2001/02)
- Indicator Piloting and Testing (in Surveys) (2002)
- Topic Reports (9 topics) (2002/03)
- Indicator Handbook (2003)

Eurostat, NSIs, OECD, ESDIS, eEurope 2005 ...

# Description format for statistical indicators

- Definition
- Notes
  - on relationships to (other) existing indicators
  - on methodology
- Sources for data and availability
  - Countries covered
  - Time series availability
- Operationalisation
  - e.g. question wording, branching instructions, data analysis instructions
- eEurope relevance

# An example: How to measure telework

- Considered important tool in eEurope Action Plan
- How it is measured currently
  - Use of Eurobarometer data (also used for Benchmarking eEurope Action Lines)
  - “Telework occurs when paid workers carry out all, or part, of their work away from their normal places of activity, usually from home, using information and communication technologies”
  - Benchmarking Report says “In the future, the definition may be revisited to include wider forms of telework/ework”.

# An example: How to measure telework

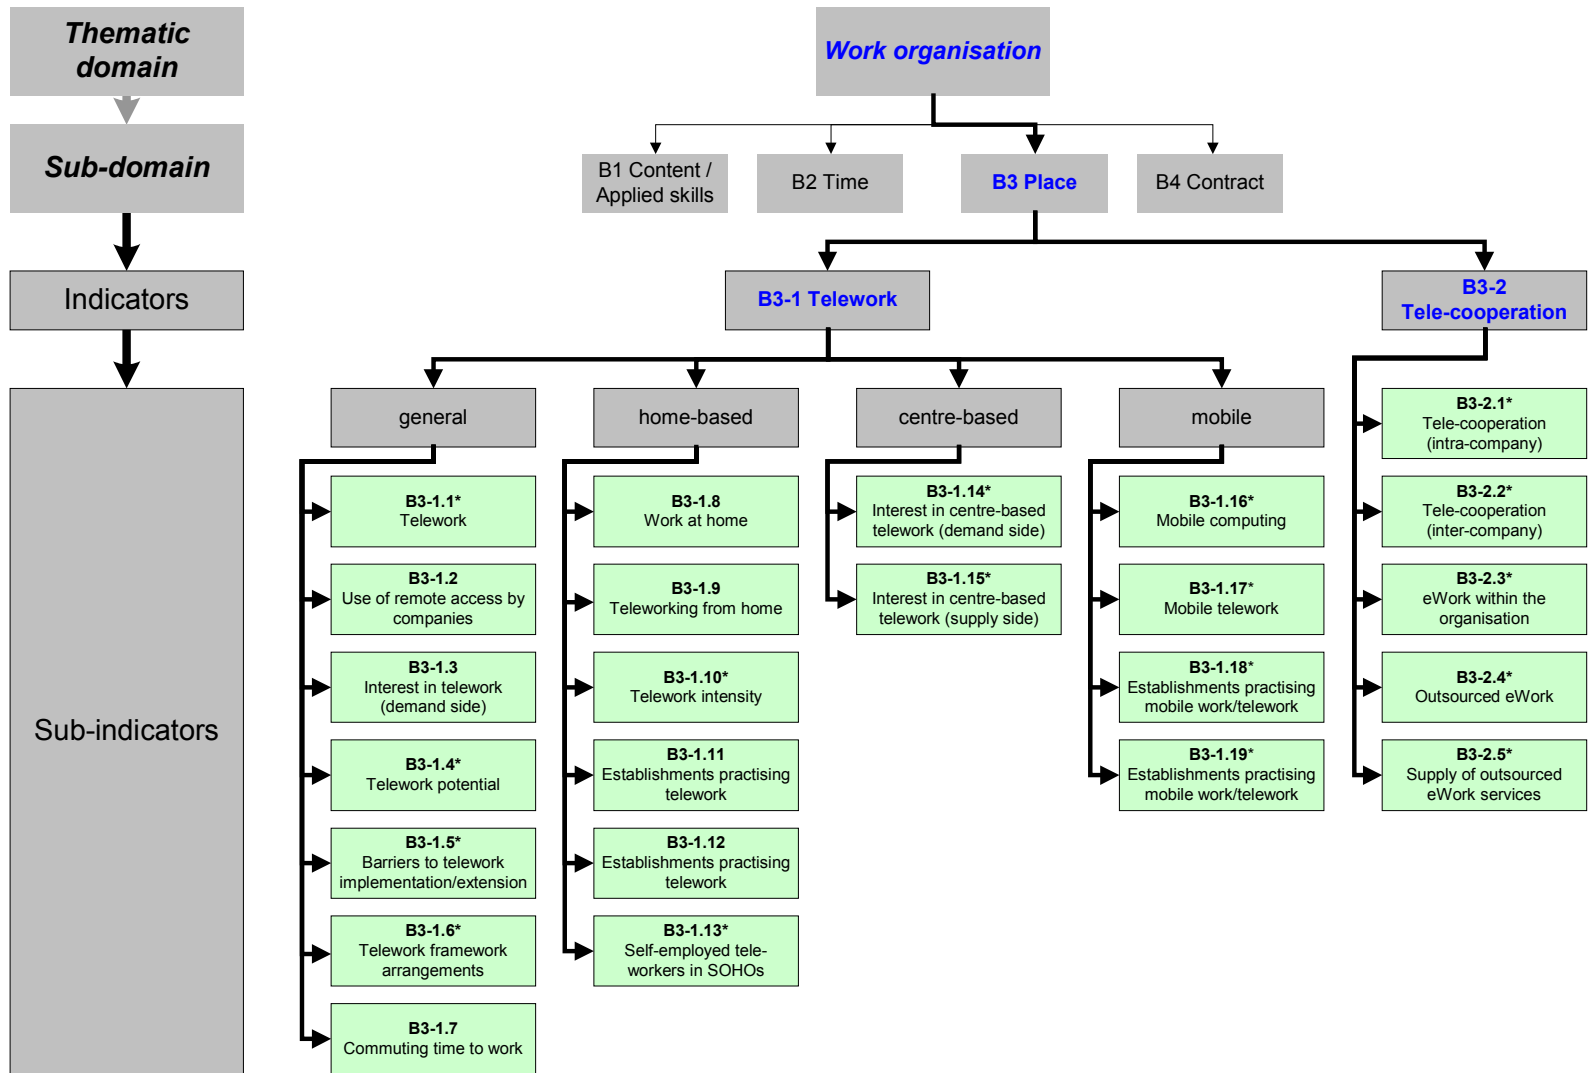

- “Telework occurs when paid workers carry out all, or part, of their work away from their normal places of activity, usually from home, using information and communication technologies. Do you currently telework, or not?”

# An example: How to measure telework

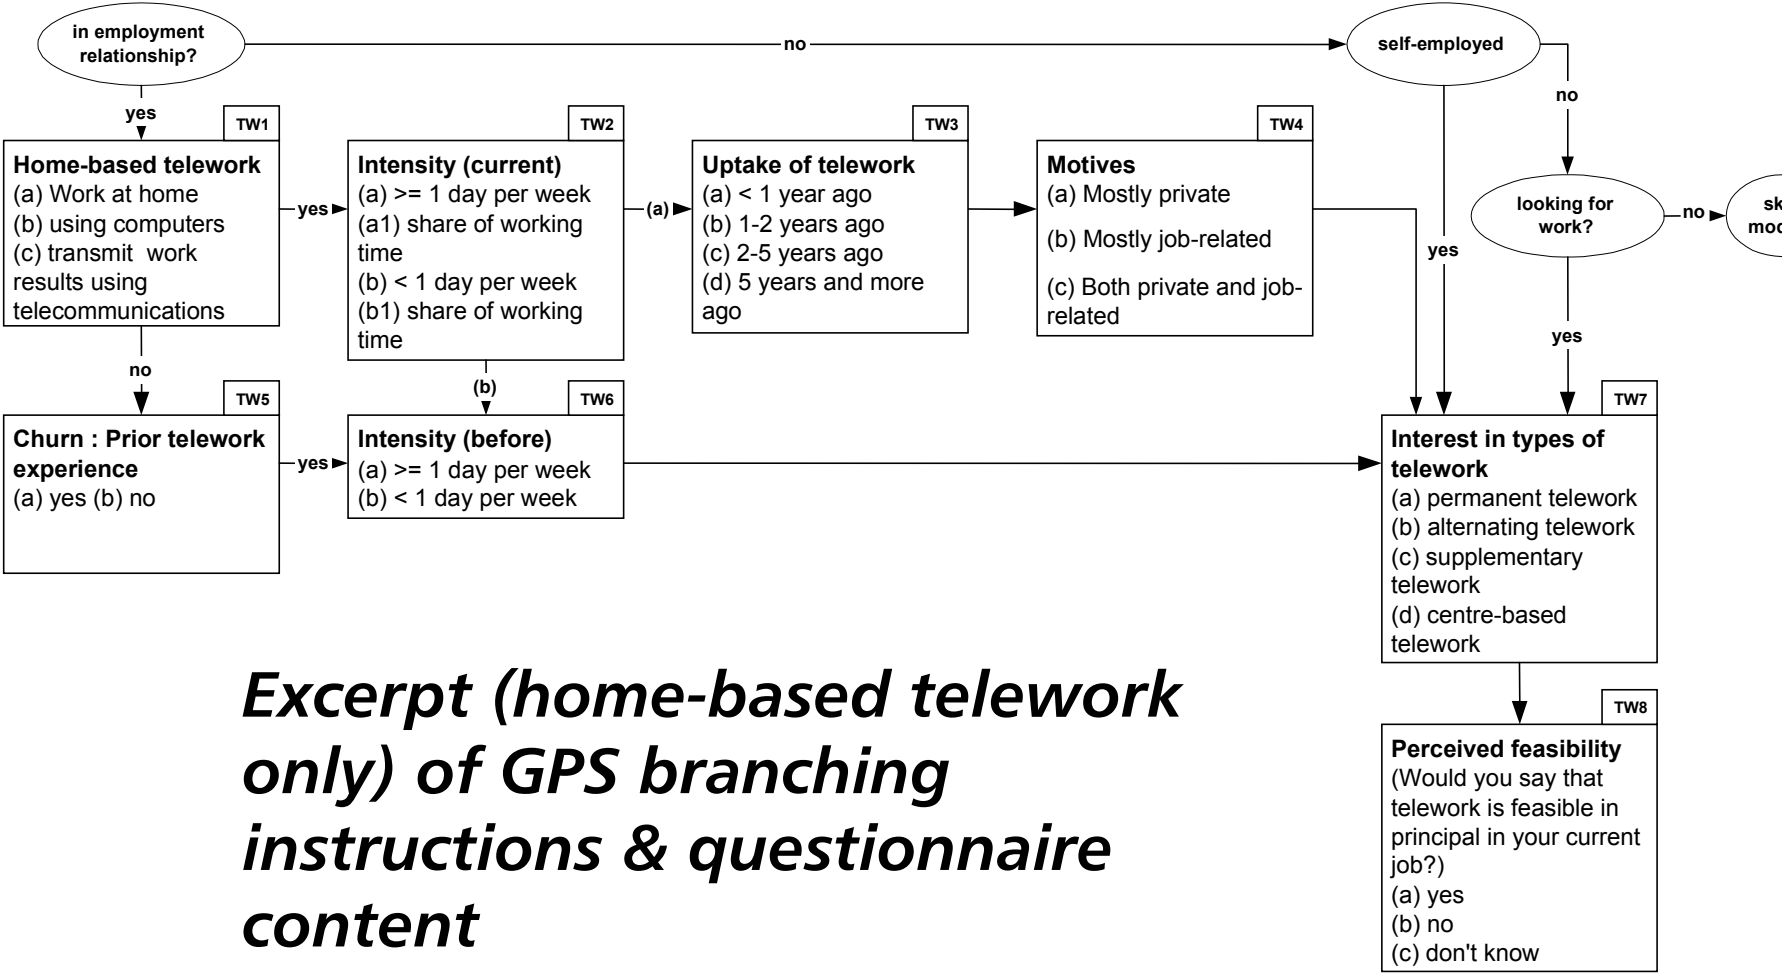

- Conceptualisation of telework
  - Home-based telework
    - Permanent
    - Alternating
    - Supplementary
  - Mobile telework
  - Self-employed teleworkers in SOHOs (small office home office)
- Telework becomes part of majority of work settings
  - "anywhere-anytime, natural interactions with a universe of IST applications and services" (Liikanen)
- Measuring intensity of telework rather than counting teleworkers

# Description of indicators

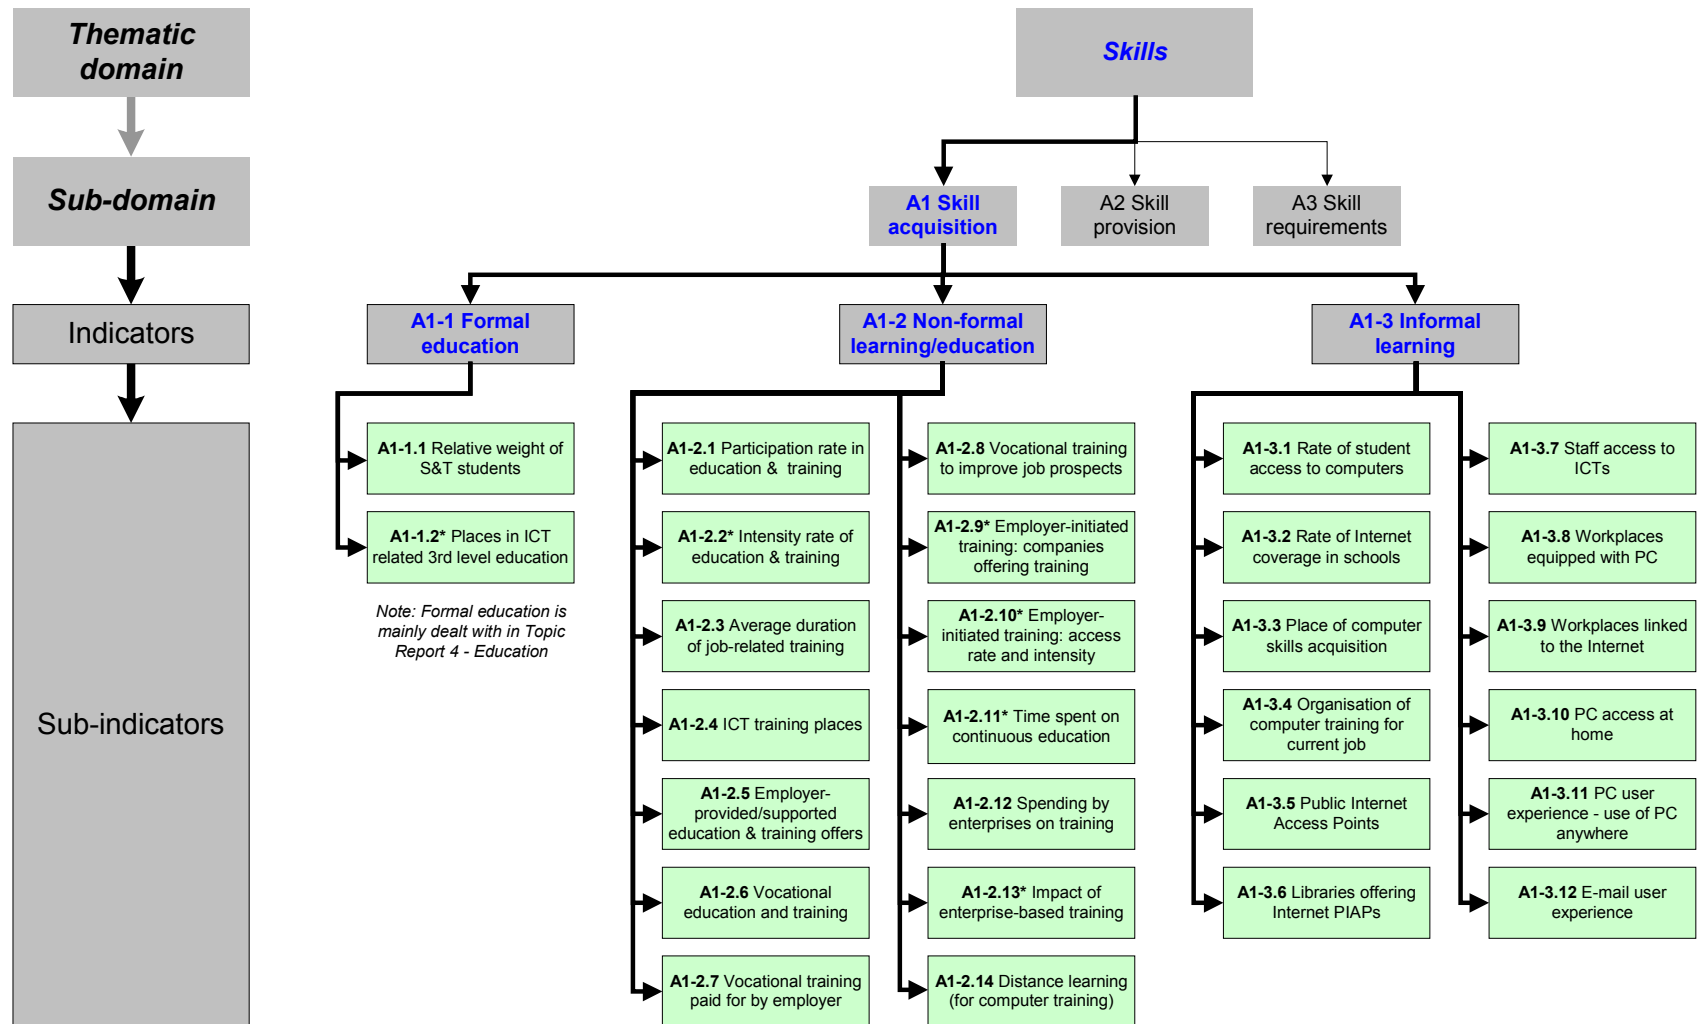

# Operationalisation of "telework" indicators

*Excerpt (home-based telework only) of GPS branching instructions & questionnaire content*

# SIBIS New Indicators (Work, Skills & Employment)

# SIBIS New Indicators (Work, Skills & Employment)

Thematic Domain	Sub-domain	Selected new level 1 indicators	Piloting in SIBIS
<b>Skills</b>	Skill acquisition	<ul style="list-style-type: none"> <li>• Use of e-learning by workers (offline/online)</li> <li>• Spread of self-directed learning</li> <li>• Share of companies that offer staff access to ICTs</li> <li>• Use of PIAPs by the population, by teleworkers</li> </ul>	SIBIS GPS SIBIS GPS SIBIS DMS SIBIS GPS

# SIBIS Topic Research Outcomes / 'products'

Plus: Executive Summary (32 pages for all reports)

[www.sibis-eu.org](http://www.sibis-eu.org)

# SIBIS Surveys: Decision Maker Survey

- Target population (observation unit): establishments
- Reporting unit: IT decision makers
  - smaller establishments: managing director, general manager, proprietor
  - larger establishments: head of IT department, senior professionals in IT department
- DE, ES, FR, IT, UK + FI, GR (sample size 300-500 per country)
- 3.139 respondents
- Disproportionally stratified sample reflecting labour force distribution across establishment size bands
- Fieldwork: April – May 2002
- Fieldwork execution and management by INRA
- CATI; ~ 50 questions; average interview duration: 16 min.

# DMS (establishments): Structure of questionnaire

## Introduction and Screener Section

**Module A: Basic characteristics** (Type of organisation, Number of staff (employees), Turnover)

**Module B: Basic ICTs take-up and intensity of use** (e-Business) (e-Mail, Internet, Intranet, EDI, Video-conferencing, Call-centre, Staff access to ICTs)

**Module C: e-Commerce** (Website/ Internet presence, Online sales, Barriers to e-commerce (selling), Benefits from / Outcomes of e-commerce, Online procurement, Barriers to online procurement, Benefits from/ Outcomes of online procurement, Online supply chain integration, e-Marketplaces)

**Module D: e-Business security** (Security breaches, Information security strategy, Barriers to security, Security provisions)

**Module F: e-Government** (Use of e-Government services, Barriers to e-Government)

**Module G: Website accessibility** (“Design for all” / ”universal design” principle awareness)

**Module E: R&D** (R&D staff, Computer staff in R&D unit(s), IT staff providing computer services to R&D, Outsourced computer services for R&D, Vacancies in IT for R&D)

# SIBIS Surveys: General Population Survey

- Target population: resident population (15+) in private households
- GPS: EU15 (AT, DE, DK, FI, FR, GR, IR, IT, LU, NL, BE, SE, ES, PT, UK) + CH + US (sample size 500-1,000 per country)
- 11.832 respondents
- Fieldwork: April – May 2002
- Fieldwork execution and management by INRA
- CATI
- > 50 questions
- Interview duration 10 - 20 min.

# GPS (population): **Structure of questionnaire I**

**Module IN: Introduction and screening** (Age, Educational attainment, Employment status, Occupation, Type of organisation, Main working place)

**Module A: Basic ICT equipment access and use** (Use of computer, Use of e-mail, Internet access and use, Methods of Internet access, Effects of Internet use, Barriers to using the Internet, Access to mobile phone, Mobile data services, Effects of mobile phone use)

**Module B: E-commerce and other uses of the Internet** (Online activities, Barriers to buying online)

**Module D: Skills** (Internet user experience and know-how)

**Module L: e-Health** (Use of online health information, Perception regarding the trust placed in online health information provider, Rationale for health info search)

**Module J: Security** (Security concerns, Reporting of security violations, Security-related awareness and behaviour)

# GPS (population): **Structure of questionnaire II**

**Module K: e-Government** (Preference for e-Government services, e-Government experience, Barriers to e-Government)

**Module E: Telework** (Home-based telework, Intensity of home-based teleworking, Duration of telework, Financing of tele-workplace, Interest in telework, Perceived feasibility, Effects of telework)

**Module F: Mobile work** (Mobile work (Intensity), Mobile telework)

**Module G: Tele-cooperation/Tele-collaboration** (Co-operation with external contacts using ICTs, e-Lancing)

**Module H: Outcomes of work** (Work-family balance, Job quality, Job satisfaction)

**Module C: Educational attainment and lifelong learning** (Company-provided training, Training provided by other organisations, Self-directed learning, Modes of training (use of eLearning))

**Module Z: Standard demography** (Household size, Disability, Income)

# SIBIS Surveys: Some Results from the GPS

- Participation in work-related training
  - Employed persons (excl self-employed)
  - Labour force (incl self-employed and unemployed)
- Self-directed learning
  - Employed persons (all in paid work)
  - Labour force (incl unemployed)
  - Unemployed
- e-Learning
  - Labour force (incl unemployed)
- Telework

# SIBIS Surveys: Some Results from the GPS

- Measuring participation in work-related training
  - Eurostat until now uses LFS data
  - LFS systematically underestimates the spread of work-related training as it focuses (in most countries) on formal training measures
  - SIBIS uses the following question wording: **Did you participate in some kind of work-related training activities that were provided either by your company or by an other organisation, in the last four weeks?**
  - Distinction between base “all with contract of employment” and “total labour force (incl unemployed)”

# SIBIS Surveys: Some Results from the GPS

Participation in work-related training in last 4 weeks

Base: All with contract of employment

# SIBIS Surveys: Some Results from the GPS

Participation in work-related training in last 4 weeks

Base: Labour force (incl. self-employed and unemployed)

# SIBIS Surveys: Some Results from the GPS

- Measuring self-directed learning
  - Although LFS regulation stresses that self-directed learning should be included in the EU data on lifelong learning, analysis of Member States' LFS questionnaires suggests that this is mostly not the case
  - SIBIS uses the following question wording: *Apart from the training that may have been provided by others, did you engage in some kind of self-directed learning related to your work, in the last four weeks?*
  - Distinction between base “all employed”, “total labour force (incl unemployed)” and “unemployed”

# SIBIS Surveys: Some Results from the GPS

## Self-directed learning in last 4 weeks

Base: All employed (incl. self-employed)

# SIBIS Surveys: Some Results from the GPS

## Self-directed learning in last 4 weeks

Base: Labour force (incl. self-employed and unemployed)

# SIBIS Surveys: Some Results from the GPS

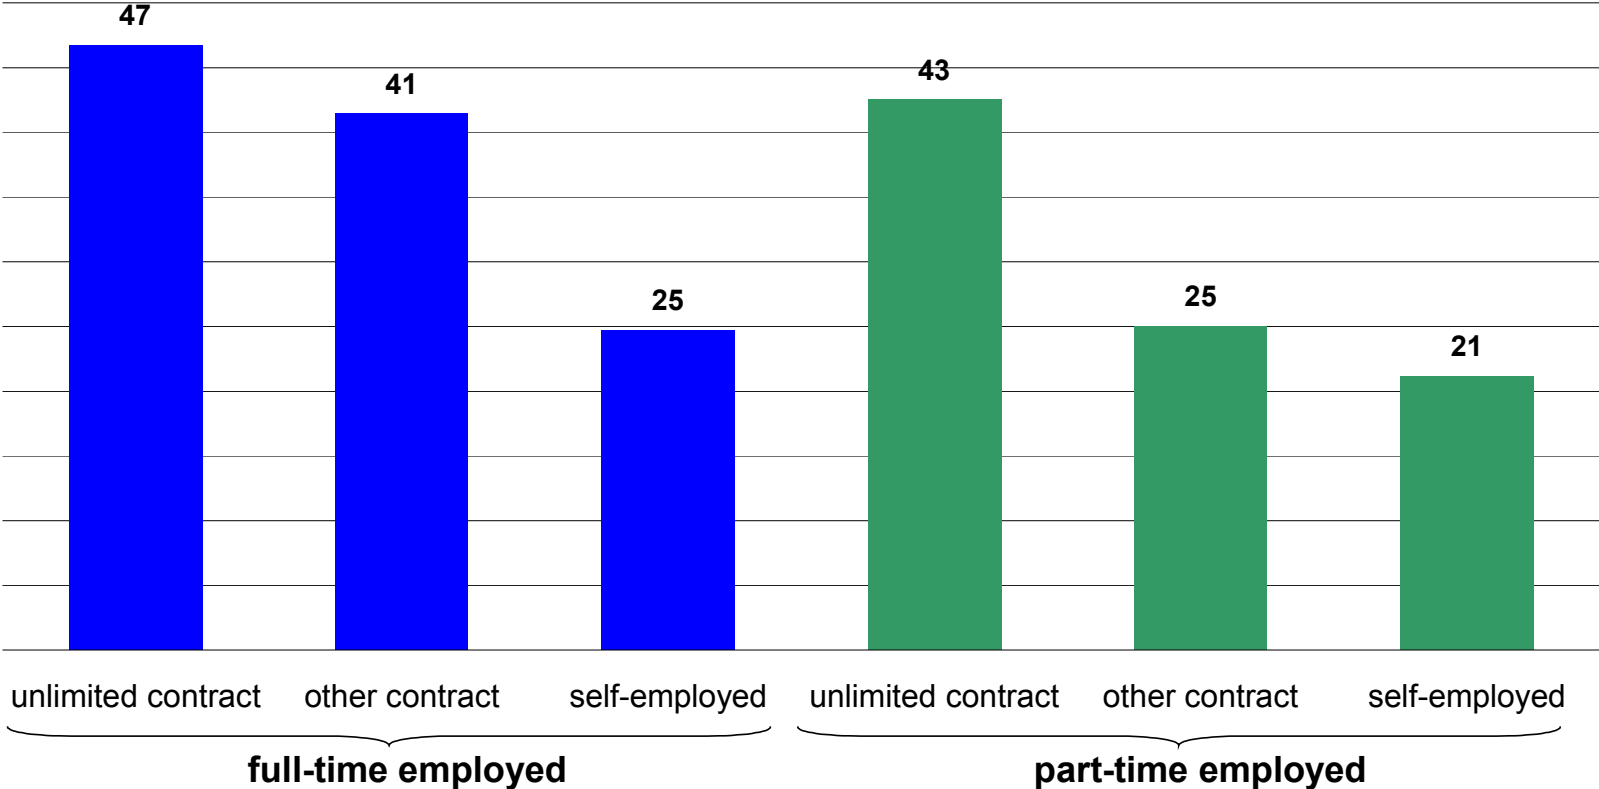

Self-directed learning in last 4 weeks  
Base: Unemployed

# SIBIS Surveys: Some Results from the GPS

Any work-related learning by type of employment

Base: labour force

# SIBIS Surveys: Some Results from the GPS

- Measuring e-learning

- The Commission's eLearning Action Plan (2001) has stressed the need for making best use of information and communication technology for enabling lifelong learning.
- No cross-country data available from other sources yet.
- SIBIS distinguishes between offline and online eLearning:  
Did you use, in the course of your training and learning in the last four weeks, electronic learning materials
  - CD-ROMs or other so-called offline media such as diskettes, audio or video tapes etc.
  - online learning materials provided on the internal computer system of your organisation or through the Internet

# SIBIS Surveys: Some Results from the GPS

eLearning in last 4 weeks

Base: Labour force

# SIBIS Surveys: Some Results from the GPS - Telework -

- Telework penetration
  - 1999 (ECATT project: [www.ecatt.com](http://www.ecatt.com))
  - 2002 (SIBIS project: [www.sibis-eu.org](http://www.sibis-eu.org))
- Number of teleworkers 1999 - 2002
  - General EU10 / EU15 plus USA, CH
  - Member States
  - Categories: home-based, supplementary, mobile, self-employed teleworking

# SIBIS Surveys: Some Results from the GPS

- Measuring telework
  - For eEurope 2002 Benchmarking, Eurobarometer Data was used
  - Working definition in Eurobarometer was very fuzzy so that it was left to respondents to decide what constitutes a teleworker
  - Other teleworking than traditional “home-based telework” was not considered
  - However, available evidence suggests that mobile telework and telework by self-employed in SOHOs are at least as important for business competitiveness as home-based telework, and also have strong impacts on work flexibility

# SIBIS Surveys: Some Results from the GPS

- Measuring telework
  - SIBIS uses separate question modules for gathering data on
    - home-based telework
    - telework by self-employed in SOHOs
    - mobile telework
  - Question wording for home-based telework: *With the help of telephone, fax and computer, many types of work can be done from home. If work results are transferred electronically, this is sometimes called telework. Do you presently telework from home, for at least some of your working time?*
  - SIBIS measures not only take-up, but also intensity (share of working time spent at teleworkplace)

# SIBIS Surveys: Some Results from the GPS

All types of telework 1999-2002

Base: All in paid work

# SIBIS Surveys: Some Results from the GPS

## - Telework 1999 – 2002 -

Country	Teleworker in % of workforce		Average annual growth in %
	1999	2002	
Netherlands	14,5	26,4	22
Finland	16,8	21,8	9
Denmark	10,5	21,5	27
Sweden	15,2	18,7	7
United Kingdom	7,6	17,3	32
Germany	6,0	16,6	40
Ireland	4,4	10,9	35
Italy	3,6	9,5	38
France	2,9	6,3	30
Spain	2,8	4,9	21
<b>EU10</b>	<b>6,0</b>	<b>13,0</b>	<b>29</b>

# SIBIS Surveys: Some Results from the GPS

## - Telework 1999 – 2002 -

Country	1999 (%)	2002 (%)	2002 (abs.)
Netherlands	14,5	26,4	2.061.048
Finland	16,8	21,8	507.068
Denmark	10,5	21,5	578.780
Sweden	15,2	18,7	777.733
United Kingdom	7,6	17,3	4.788.121
Germany	6	16,6	6.138.348
Austria		13,8	516.258
Greece		11,1	438.006
Ireland	4,4	10,9	181.376
Belgium		10,6	421.138
Italy	3,6	9,5	1.983.030
France	2,9	6,3	1.472.625
Luxembourg		5,6	14.672
Spain	2,8	4,9	707.854
Portugal		3,4	165.818
<b>EU10</b>	<b>6</b>	<b>13</b>	<b>20.643.610</b>
CH		16,8	-
USA		24,6	36.719.190

# SIBIS Surveys: Some Results from the GPS

## Home-based telework: Intensity

Share of total working time (absolute numbers)

# SIBIS Surveys: Some Results from the GPS

- working at home with PC
- using ICT to transfer work results
- permanent, alternating or supplementary

- working away from main place of work
- using online-connections during business trips or in the field
- e-mail, Internet or remote access

- home is the main place of work or the base for trips into the field
- using ICT to transfer work results
- SOHO = small office, home office

# SIBIS Surveys: Some Results from the GPS

Spread of Telework in EU15		
	1999	2002
home-based telework >= 1 day per week	2.0%	2.1%
home-based telework < 1 day per week	2.0%	5.3%
mobile telework	1.6%	4.0%
self-employed in SOHOs	0.9%	3.4%
all types	6.1%	13.0%

# SIBIS Surveys: Some Results from the GPS - Telework 2002 -

Category	Country	Teleworker in % of workforce 2002
<b>Frontrunners</b>	Netherlands	26,4
	Finland	21,8
	Denmark	21,5
<b>Fast followers</b>	Sweden	18,7
	United Kingdom	17,3
	Germany	16,6
	Austria	13,8
<i>Average</i>	<i>EU</i>	<i>13,0</i>
<b>Slow followers</b>	Greece	11,1
	Ireland	10,9
	Belgium	10,6
	Italy	9,5
<b>Sedentaries</b>	France	6,3
	Luxembourg	5,6
	Spain	4,9
	Portugal	3,4

# Measuring the digital divide in the society: a pilot for 4 risk groups (DDIX)

The policy focus is on the presumably disadvantaged segments of society (“risk / disadvantaged groups”):

- The **Gender** dimension
  - **Risk group:** women
- The **Age** dimension
  - **Risk group:** elderly people (in this study defined as “**50+ years old**”)
- The **Education** dimension
  - **Risk group:** low education (= **formal education finished at age of  $\leq 15$  years**)
- The **Income** dimension
  - **Risk group:** low income (= **lowest quartile**)

# Selected indicators for DDIX

- **four indicators selected to build the composite index: data availability driven choice of indicators, but core indicators for current digital divide paradigm**
- **data: Eurobarometer surveys (1997, 2000)**

## Indicators

- 1: Percentage of **computer** users
- 2: Percentage of people who use a **computer at home**
- 3: Percentage of **internet** users
- 4: Percentage of people who use **internet at home**

# The compound Digital Divide Indices on EU Level (1997 / 2000)

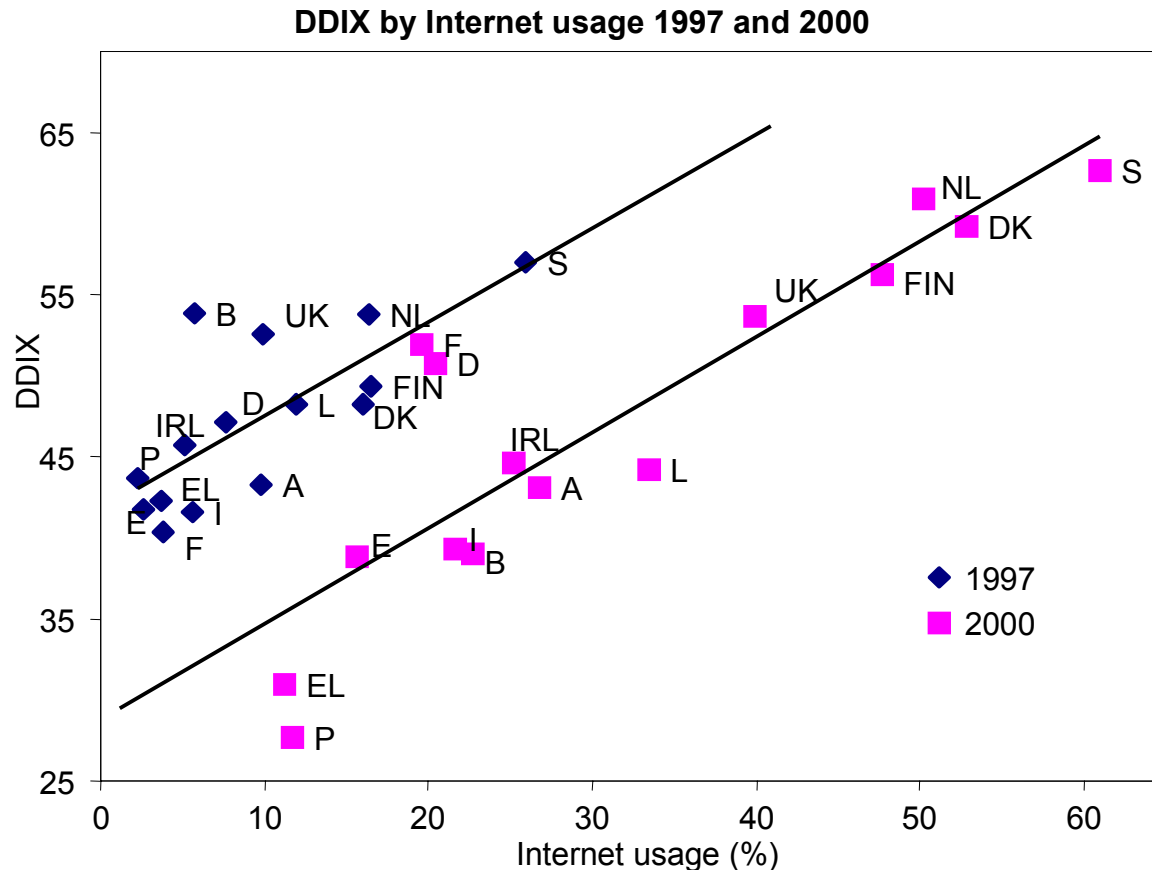

# The "DDIX" 1997 and 2000: Comparison of Member States

# The "DDIX" 1997 and 2000: Comparison of Member States

- Stagnation on EU level effect of equality having improved in some Member States and aggravation in others:

# Model based on diffusion theory

- The **gap** between the risk group and the population average will (normally) increase at first and decrease once the risk group has entered the take-off period.
- Simple deterministic logistic curve modelling would expect only increasing **ratios** over time, however.

# Summary: Basic results

- Usage of computers and internet is still very uneven across different socio-demographic groups.
- The most threatened groups considerably lagging behind are:
  - People with **low education** are only **28%** as likely as the average to use a computer and the internet.
  - **Elderly** people are only **39%** as likely.
  - People with **low income** are only **54%** as likely.
- The “**gender divide**” in using computers and the internet is closing in nearly all Member States.

# Summary: Basic results

- The Digital Divide Index (= diffusion ratio risk group / population average) has stagnated between 1997 (48) and 2000 (50).
- But the dynamic was a different one in the four dimensions analysed in this pilot study:

	Index 97	Index 00	Change %
<b>Gender</b>	73	79	+ 8.2 %
<b>Age</b>	46	39	- 15.2 %
<b>Education</b>	26	28	+ 7.7 %
<b>Income</b>	45	54	+ 20.0 %

Note: perfect equality = Index of 100

# Summary: Member States

- Results suggest that the digital divide is wider in less advanced than in the leading countries (in terms of using ICT).
  - The compound Index is **lowest in Portugal and Greece** (i.e. there are the highest relative levels of social inequality in using computers and internet).
  - The Index is **highest in Sweden, NL and Denmark**.
- Note: The results are very different if the absolute distance (in percentage points) is measured.
  - But: We argue that - for most purposes - the ratio should be used as the standard measure.

# SIBIS and SIBIS+

- SIBIS extension towards NAS:
  - Slovenia
  - Hungary
  - Slovak Republic
  - Czech Republic
  - Bulgaria
  - Romania
  - Estonia
  - Latvia
  - Lithuania
  - Poland
- **General Population Survey (GPS) in NAS10 later in 2002**
- 6000 interviews in 10 countries; mostly PAPI
- Result: GPS data for: EU15, CH, USA and NAS 10 (27 countries)

# SIBIS Next steps in the project

## 9 Topic Reports (education, work, e-commerce, ...):

- Executive Summary (which mainly contains results: GPS and DMS)
- Introduction
- Identification of the indicator framework and hierarchy (5-20 pages)
- Analysis of data (20 to 50 pages) (which also includes the discussion on quality of indicators, drawbacks, limitations etc.)
- Identification of gaps / Questions arising from the analysis
- Conclusions

Draft: September 2002

Final: April 2003

## Indicator Handbook

April 2003

# Synopsis of survey questions and comparisons

- E-Commerce surveys of companies:
  - EC survey on ICT usage of enterprises (2003) (PAPI)
  - SIBIS Decision Maker Survey (DMS) (2002) (CATI)
  - E-business marketw@tch (2002) (CATI)
  - ECKMU-2 (2001) (CATI)
  - ECATT (1999) (CATI)
- Household / population surveys: Add „Eurobarometer“
  - EC survey on ICT usage of households (2002) (CATI or CAPI recommended)
  - SIBIS General Population Survey (GPS) (2002) (CATI)

# Co-operation

## SIBIS – Eurostat – NSIs – ESDIS – eEurope 2005

- Objective:
  - harmonisation of IS / ICT statistics
  - eEurope 2005 indicator development for benchmarking
  - Contributions to policy development
- Next Steps (proposal):
  - Sharing of experiences from indicator development, piloting / testing and surveys
  - Joint development of new indicators
  - Identification and discussion of overlaps, complementarities, synergies in questionnaires
  - Where appropriate: ad hoc use of relevant SIBIS:
    - Indicators
    - Questions
    - Questionnaire modules

# Thank you very much for your attention!
